Client Case Study & Success Story

Fast-Track UI-UX Design Support For Sprout App

Client Intro

Sprout is an innovative app designed to help people discover new passions and cultures through immersive and hands-on activities. From tango dancing and tamale-making to glass blowing and beyond, Sprout connects users with unique cultural experiences in their local area. As a startup in its early stages, Sprout needed a functional prototype to bring their idea to life and begin validating it with users, stakeholders, and investors.

Client Challenges

Sprout approached DigiReps with urgent needs and a tight timeline:

- **Limited Budget, Big Vision:** With a very low budget, Sprout needed a high-quality design solution that wouldn't compromise on creativity or functionality.
- **Prototype Pressure:** They needed a working prototype within a month or sooner to kick off presentations and development.
- **Design Resource Gap:** They lacked an in-house designer and needed immediate UI/UX expertise to transform their vision into a usable product.
- **Incomplete Visual Direction & Need for Autonomy:** While they had some graphics and initial ideas, Sprout required a designer who could independently fill in the gaps, structure the user journey, and build a cohesive interface with minimal oversight.

DigiReps Solutions

DigiReps delivered a tailored design solution by:

- **Placing a Skilled UI/UX Designer Quickly and Cost-Effectively:** Within days, we connected Sprout with a remote UX/UI Designer from our global talent pool experienced in startups and MVP builds—at just $30/hour, which is 50% less than a UX/UI designer median salary in North America
- **Turning Ideas into Interfaces:** Using the provided graphics and direction, the designer created a functional prototype with intuitive user flows.
- **Agile and Independent Workflow:** The designer worked autonomously, reducing the client's workload and keeping the process simple and efficient.
- **Delivered on Time:** The full prototype was completed ahead of the deadline, giving Sprout a valuable tool for development planning and investor demos.
- **Ongoing Partnership & Scalable Support:** The complete turnaround of the app project took 4 months, and since then, DigiReps has continued to support Sprout on multiple ongoing initiatives.

AT A GLANCE

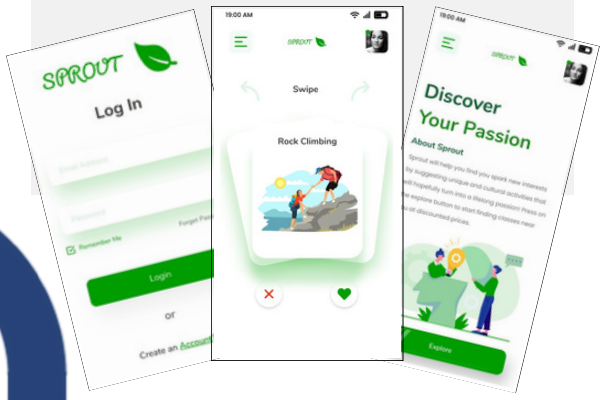
Challenges

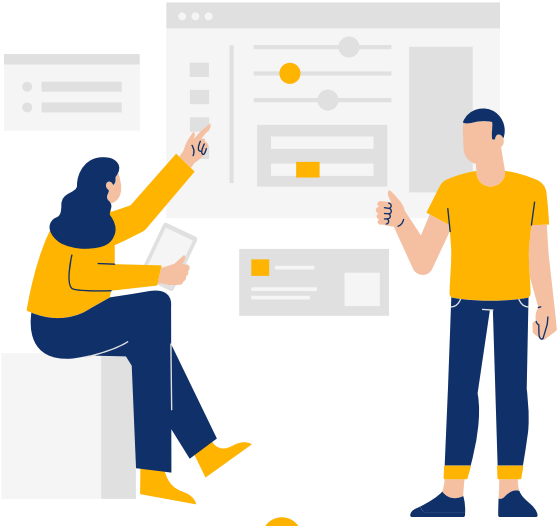
- Very limited budget but high design expectations.
- Urgent need for a functional prototype within a month.
- No in-house designer or UI/UX resources.
- Incomplete visual direction; needed someone who could work independently.

Solutions

- Placed a skilled UI/UX designer within days at 60% below market rate.
- Developed a functional prototype based on partial graphics and vision.
- Delivered a design focused on culture, user interest, and ease of use.
- Enabled fast, independent execution with minimal client oversight.
- Completed the full project in 4 months and continue to support Sprout on ongoing work.

A Glimpse of what we Delivered:





Successes

Prototype Delivered in Record Time:
A fully interactive prototype was created, enabling Sprout to test and pitch their product confidently.

Clarity and Structure:
The app design gave shape to Sprout's vision, providing a clear, structured, and user-friendly experience.

Reduced Operational Load:
With DigiReps handling recruitment and project management, Sprout saved time and energy.

Takeaway

DigiReps empowered Sprout to move from concept to clickable prototype within weeks by delivering top-tier UI/UX design support. Our agile process and reliable talent enabled them to bring their cultural experience platform to life and take their next big step toward launch.
